# **campbell hausfeld pressure washer repair manual**

It also has a tough textured rubber outer cover, not just thermoplastic that is stiff, kinks and breaks. Just can't handle continuous use of much longer than an hour or so without letting it cool down. Great for sidewalks, patios, and bricks. Works better than new. Not a biggie and it's actually better for supply hose as the cart is moved. The pressure hose port this was an issue. My hose wouldn't fit inside the port the port wasn't large enough. I decided to drill out the port, which I did, and now it works I have the tools and knowledge to do this. What surprised me was the ease in drilling the brass fitting, until I realized it wasn't brass at all, but brass plated aluminum. Not an issue, aluminum will work just as well for my usage of the pump, but certainly was surprised I didn't even realize they made brass plated aluminum until I drilled. The mounts line. full review The upgrade in pressure was an added bonus. My old one froze and stopped pumping. Actually I can answer that too expensive. I found this one for barely over 100.00 and ordered it. I purchased it to clean my patio before I started to stain it, it worked very well. So well that I have been on a spring cleaning binge. I have been pressure washing everything my car, the stucco walls the patio and the trees. Well let me first explain you do have a strong line which gives you that strong pressure but you can also adjust it where you receive a high pressure but soft feel where it won't destroy things such as plants, stucco, car paint and so forth. I use that setting more than any other. I absolutely love it and would suggest anyone owning a home to purchase it as a must have. The outside of my house. Could be an engine problem if not coming up to full speed. Loosen and separate then check. It may also be a broken Oring. The high pressure hose connects to the high pressure outlet on the lower front of the pressure washer. Here is the operators manual that will show both connections. You would have to call their 800 number and speak with a parts person to determine availability. You may be able to purchase a close match at a local True Value hardware store. They sell a variety of brushes for many major brands of tools. Purchase a slightly larger set of brushes and sand them to size. If the connector is different, cut off the old connector and solder it to the new brush. I would suggest that you try their site and ask them to send you a PDF file on the tool. Also they have a year warranty on normal use products, so that might be an option also depending on when you bought it. Good luck and let me know if still having problems and I will try another route to help. Answer questions, earn points and help others. The motor is damaged, overloaded or overheated. The pressure washer uses high pressure water to assist in cleaning soiled exterior surfaces or machinery with little or no scrubbing by hand. If the pressure washer does not operate normally, troubleshoot it and identify the problem. Simple repairs or minor adjustments will fix most common issues. If the pressure washer does not work properly after performing troubleshooting, call for service. The pressure washer has been pressurized. Refrain from using extension cords. Unscrew the hose and remove the filter. Remove dirt and debris, replace the filter and tighten the hose.

Squeeze the trigger several times to release pressure. Turn the nozzle to the setting for a narrow stream to open the fan blades. Insert the tip cleaner included with the pressure washer into the hole on the nozzle and dislodge debris clogging the nozzle. Longer hoses decrease suction. Pressure Washers. How do I start my pressure washer? The engine does not come with oil. Set the fuel valve lever fully to the right in the "ON" position. What type of oil do I use? Engine The engine DOES NOT COME FILLED WITH OIL. See Page 10 for engine oil types and quantities. Pump. The pump comes filled with the correct amount of oil and should not need changing or filling. Refer to Pages 9 and Why don't I have any water pressure? Is the water hose attached to the pressure washer? Is the water turned on? Check for any kinks, leaks, or blockage in the hoses, fittings, or the nozzle. Is the quick connect tip in place? See Page 5 and 6. Is the inlet filter screen free of debris? Check and remove debris if needed. How do I get high pressure? Use any color tip except black. The black tip is only used for low pressure detergent application. How do I get the soap suction to work? Why doesn't the pressure washer apply detergents with high pressure? Detergents "bounce" off cleaning surfaces as fast as they are applied. The pressure washer's features allow for a detergent. By applying detergent at low pressure, the effect of "bouncing" is reduced.

Also, detergents are only effective when time is allowed for them to work on the surface of whatever is being cleaned.
