Amazon calculates a product's star ratings based on a machine learned model instead of a raw data average. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. See All Buying Options Add to Wish List Disabling it will result in some disabled or missing features. You can still see all customer reviews for the product. I was very skeptical of a powered sub that was this compact and this inexpensive. I was proven wrong for the skepticism. I have this connected to a sony xplode head unit purchased from crutchfield that has a low level sub output. The sound I get from this sub has so much power and clarity I thought about how to wire one for my home stereo, too. Unfortunately, it did not fit under the seat of my 2004 Saturn L300. It does sit in an almost upright position on the floor under the dash in front of the passenger seat with legroom still for my wife. Also, as with any subwoofer and amp, there is the need for tuning the levels for optimum output. Stereo output levels, stereo equalizer levels, subwoofer gain level, subwoofer bass boost level, stereo crossover levels, and subwoofer crossover levels all need adjusted for optimum listening. There really isn't an easy, cookie cutter way of doing all of this. You just have to play with all of the levels. All of the fidgeting with the levels is well worth the effort with this powered subwoofer. I still enjoy the amazing sound that comes from this unit. I have had no problems. It still sounds great. If you are getting distortion, you have a bad signal connected or you have the gain too high. You will not find a setting that will work for all songs or media. USE the remote level dial. Install was somewhat difficult due to HVAC duct under seat, which I was able to cut apart and reshape so it would blow over the top of the subwoofer.

<http://archideya.com/images/cardioline-delta-1-plus-ecg-manual.pdf>

Sound quality was acceptable, and definitely added a needed dimension to the sound you can get from 6x8 door speakers, but nothing spectacular. Apparently I was one of the lucky ones who got a whole 24 months of usage out of my unit before the electronics failed. No blown fuse, no weird noises just dead as a doornail, LEDs off, no sound. Pulled it from the truck, opened it up, spent an hour checking components with the multimeter, but it's not at all clear why it died. It was good while it lasted, but I hate products that are designed to be disposable. Recommendation Do not buy this or the halfdozen products on Amazon that are clearly made in the same factory. See Pyle, Boss, Lanzar, etc. Instead, check out the Sound Ordnance products, which are similarly sized but come with a 3year warranty. Please try again later. Translate all reviews to English I have an aftermarket stereo with high quality component speakers, but was lacking the low end only a sub can provide. The BOSS 1200 unit is exactly as advertised and does a great job of providing the low end I was lacking.

I have and will continue recommend this product to fellow Tacoma owners. Please try again later. Please try again later. Sonido muy aceptable y de facil instalacion. Lo recomiendo. Please try again later. Please try again later. Hector Antonio Santana 1.0 out of 5 stars Please try again later. Please try again later. Keith Del Guercio 1.0 out of 5 stars I tried every connection possible, direct from my player, direct out of the EQ without filtering and I get the same results. The sound quality is awful. Its basically a low frequency vibrator that has very little power. I expected a low hard kick from my bass. This subwoofer added nothing to my sound system I cant begin to tell you how upset I am. How can 30 other people give this a good review. It boggles my mind. Please try again later. Please try again later. W. Yeates 1.0 out of 5 stars The first week it worked great.

I followed the owners manual instructions and It did not recover. So I called Boss and got a return authorization number. Please try again later. Please try again later. John Montana 3.0 out of 5 stars It does that and it does add the sub bass I wanted. It appears very durable and well built. Nothing flimsy on this unit. the bad. the sound quality does NOT compare with a box or bazooka. It just doesnt. If you have the space to put in a small box, do it. BUT, there is not that kind of room in my truck. Thats the tradeoff. forget the outlandish power rating. This thing is 50 watts usable at most. Not sure on what planet they came up with the power rating. The light on the remote gain is blindingly bright at night. Also, only the first 23 clicks on the gain seems to matter. After that, it is wide open. The sound quality is mediocre. Overall, I would purchase again. I give it a 2 on sound, 4 on value, and 5 on size and ease of installation. Ordered the BOSS 8 ga install kit on Amazon to install this unit and it was easy. Would definately go that route again. Please try again later. Please try again later. Amazon Customer 1.0 out of 5 stars I wanted an all in one unit that didnt take up a lot of room. Yes, the Bass 1200 is cool, compact, and doesnt use a lot of power. BUT you cant put it in the trunk because it isnt powerful enuff. If in a 4door, you have to put it under the seat. Its not 1200 groundshaking watts or whatever. Apparently, BOSS exaggerates their wattage claims according to some reviews Ive read by car audio enthusiasts. NO, I didnt blast Lil Wayne or some crap through it at full vol. I was kinda pissed when it stopped bumping. SO. I ripped out all of the circuit boards, jacks, and other crap and left only the sub. Then I soldered 2 16 gauge wires from each post on the sub to 2 home audio speaker terminals that I put where the old RCA jacks were.

[totalyoumovement.com/wp-content/plugins/formcraft/file-upload/server/content/files/1626eadc8dedeb---bosch-maxx-7-sensitive-manual.pdf](http://totalyoumovement.com/wp-content/plugins/formcraft/file-upload/server/content/files/1626eadc8dedeb---bosch-maxx-7-sensitive-manual.pdf)

Then, temporarily, I used extrasticky duck tape to cover all of the holes in the box the best way is to cover them from the inside. YES, you HAVE TO COVER THE HOLES UP, OR IT BASICALLY WILL NOT WORK. Theres no way that the Boss 1200 runs at 600 watts RMS, as it claims. The Cadences 350 RMS pretty much has it at its limit. Sounds just as good and hits just as hard I think except now I have to put the amp somewhere. You cant turn everything up on the amp though, as the sub will surely distort. 600 rms, 1200 watts. HAHHAHAHA, freakin dumbasses!! Im looking for a thin box, and this thing is about the thinnest out there, that I have found. So dont throw your Bass 1200 in the trash right away. Youll read bad reviews like mine, and awesome ones. But seriously, get a separate amp and sub unless you want to end up with a Boss speakerbox. Get what you can afford. Please try again later. Please try again later. Robin Rogers 1.0 out of 5 stars This was with the bass turned down and without distortion. It has now been almost 3 months and every time I call they tell me parts for this are on back order and refuse to do anything else to remedy the situation. I knew going in that buying this was probably not the best idea as far as quality but I did expect to get more than a few months of use out of it before I had to find a better alternative. Buyer beware if you buy from them the warranty is non existent. Guess I will make my weekly call to them so at least I can get something in return for the faulty unit. Please try again later. Please try again later. J. R. O. Neal 1.0 out of 5 stars At first it worked great, no window rattling bass, just enough bump to sound good. Occasionally, it will suddenly go back to normal, but that is short lived. Do not buy a Boss product,

spend a little more and consider it an investment in quality. Please try again later. Please try again later. R. H. 1.0 out of 5 stars Very little bass, cuts out on a regular basis, nothing good to say about it at all.

I recently purchased a MTX subwoofer for about the same price and the difference is astounding. After hearing what a real subwoofer sounds like, I'm dropping the Boss off at a local thrift store. The MTX is supposed to be half the power of the Boss and is 5 times louder. Bottom line, avoid this product. Please try again later. Please try again later. Delivery times may be longer than usual.
