Astonishing difference in the quality of sound. Expecially if youre recording i nstudio, this is like having all the wah options in one box, which makes it really worth the money in a long run. Avoid having other wah until you try this one. The boost knob also colors the sound slightly, but it a way that really makes you smile, again. I also like the fact that I FINALLY have a led to know if the baby is on or off in live situations. Great pedal, worth ALL the money in my opinion, one of the best pedals available on the market today. <http://www.salamon.pl/userfiles/dgu-14a-degasser-manual.xml>

Apart from this really minor detail, if you're looking for a quality wah which is also a booster and gives you a wider palette of tones, buy it, you won't be disappointed. Send report Total quality handling features sound Versatile wah great sound Alexander aus N., 19.02.2014 The features on this wah pedal made me want to have one immediately. I used to play Morley wah pedals because of their convenient switch i.e. step on it and go, but I wasn't quite happy with the sound. Since I am using the high gain channel on my amp most of the time, I really dig the red setting of the wah. This takes away the versatility in live situations. Send report Total quality handling features sound great addition to my gear JJJ, 27.02.2014 This wahwah lets you choose between red or yellow Fasel inductor. Difference in sound is very distinct and I like both options. So this is really a killer feature to me. Certainly it seems like a nice thing to have. Another great thing about this pedal is integrated booster this is exactly what I needed. It can be easily used like a booster pedal when it is leaved in down to switch position. But it needs to be mentioned that it colors the tone very much. I personally find it a good thing, but some people might want something neutral. When it is on yellow, the sound is bright, if you switch on in red, it gets darker and thicker. I can notice some difference in low frequency response compared to unboosted amp, but I don't see it as unwanted low frequency rolloff. Sent it back to Thomann for repair under warranty by the way I am very happy with the service got it back quickly. Since then it works fine, but still remains a little noisy. The pedal is otherwise built solidly, replacement parts are available and it shall be easily serviceable. Send report Total quality handling features sound The best wah pedal on the market Heaventeo, 06.01.2019 Yes it is. Why 1. Reliable, because it is built with high quality components. 2. Tone. <http://www.thedreams.cz/files/dgttec-set-top-box-manual.xml>

Yellow Fasel or Red Fasel, it has the best Wah tone. 3. Boost inside. How many times you had another Wah pedal and you had to switch on another boost pedal to play solos in front of the mix. Now you have 2 in 1. Total appreciation for Mister Bradshaw. It will make you happy till the end of your life. you dont end up with almost a fundamental bass note in the lowestwah position.

<http://www.diamondsinthetaking.com/content/3m-tape-machine-manual>

Increasing the manual also extends how far up the top range you can go. Think of manual as the startfrequency range of the wah. This would explain why Kulle had to make the tweaks that follow. I think everyone should expect to have to tweak these a bit no matter what. CAE stands for "Custom Audio Electronics", the legendary guitar rig designer Bob Bradshaws company. CAE stands for "Custom Audio Electronics", the legendary guitar rig designer Bob Bradshaws company. The sweep is the thing I love the most on the real thing. The knob setting I use on the Dunlop is slightly offcenter, towards the more highend setting. I was impressed with its smoothness, and Nico verykindly agreed to share it upon my request. You can view the clip and thread Here.Morepowerful mids. Its not perfect, but pretty close. Extract the contents of the.zip file linked to above. Eject the USB stick, wait 5 seconds and remove it from your computer. All conventionalwah presets are prefixed with the letters "WW", so they appear at the beginning of the factorywah selections in the list. Touchwah presets are prefixed with the letters "WWAH" and begin with the word "Touch" so that they appear neatly alongside the factory ones. Do You Own a Rare Wah. Let Me Know. Instructions are below the download link and also in the file. Special mention must go to Don Petersen, who not only contributed the greatest number of presets, but helped so many others in the creation of theirs too. Thank you Don and everyone on behalf of all of us! List in alphabetical order for easier navigation. Grammar and syntax corrected and comments editorialised.Similarly, if a wah

models full name or a clearenough abbreviation of it cant be included in its preset name, an editors note in the list will provide the full manufacturer and model name. Im sure we all want the thread to be taken seriously.

<http://addi800.com/images/briggs-and-stratton-model-g23-manual.pdf>

I know youre pretty much all over the sourcecode thing, arent you I thought it wise to post only the list in the OP, with explanations and whatnot in the 2nd post. I made sure that the link Ive placed in my sig takes one exactly to the very start of the list. I also provided info at the top of the old list as to what happened, and the same link to here. So a continuously part would be close to the OP. I just knew thered be things I hadnt thought of. I cant host anything as Ive uploaded nothing to the internet except my avatar really!, and Im in no hurry to do so until Ive eventually got music to share or sell. However, given the tiny file size of Kemper presets, I cant help but think that the mods might be down with the idea of their being uploaded to the forum. They could, for instance, occupy the 2nd post slot, at least until the wah list grows to the point that it requires that space, if that ever happens. Looks good to me. Woohoo! Keywords Clarity! Regardless of what we might say, experience tells me that the thread will grow. Therell be logistical discussions such as about whos going to host the presets at any given time. Who knows what might crop up. The thing we should remember, IMHO, is that theres no more appropriate place to discuss the list, the presets and indeed other related issues than here. This is precisely why the first 3 posts will be used for the list, the preset link and relevant information, in that order. Nice and neat. The links in my sig point exactly to the list 1st link and the DL post 2nd link. That way we will know at a glance if its a new listing or not. Thank you! Choose between inductors and turn the boost on or off with the sidemounted kickswitches; bright LEDs on each side of the wah indicate operation status. Amazon calculates a products star ratings based on a machine learned model instead of a raw data average. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers and factors that establish reviewer trustworthiness. The difference is night and day, theres SO much more

control with the real thing. This wah is very nicely made, Ive got two and there are no construction anomalies on either. Good QA. The unit has the standard Jim Dunlop CryBaby size and design which is obviously tried and tested over many decades but its then been modified to include side switches for the dual fasel inductors and the boost. The former give two very different wah sounds that behave differently in use. Both are great but my prefence is the yellow option coloured leds indicate which is in use. The side switch are easy to use and durable, just tap it with the side of your foot. I dont use the boost control because I have a solo mode on my amp but it does work and can be preset for volume with a rotary control on the side of the wah. As always the device can be battery powered or mains powered via an adapter. NOTE I had intended to mount my wah on a PedalTrain2 but when I tried it I wasnt happy with the angle of the pedal and also the underside of the unit is difficult to velcro up because of the battery box and plastic film covering the nicely made bottom plate. Therefore my wah lives on the floor and my volume pedal took its place on the PT2. Sorry, we failed to record your vote. Please try again With two wah sounds one classic bright sound and one warmer funkier sound and variable gain boost, this is perfect for gigging. Man, this is a serious solid bit of kit. I havent opened it up to play with the quality factor of the filters but one can if so inclined.

<http://www.1atlanticfunding.com/wp-content/plugins/formcraft/file-upload/server/content/files/1626f91dc19cb6---bose-802-series-ii-service-manual.pdf>

Pedal it self isnt too loose, and isnt too firm, so responds to foot pressure nicely. Works well with battery I hear it will last ages or a quality power supply. Highly recommended. Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again Absolutely superb sounds and the true bye pass does not weaken your guitars original sound. Well done Jim and Custom Electronics. Sorry, we failed to record your vote. Please try again Desde Funk hasta el Metal mas pesado este pedal sirve para todo. Su construccion es de la mejor que existe. Amo a este Wah. Sorry, we failed to record your vote. Please try again So much diversity and well built. Sorry, we failed to record your vote. Please try again Je suis tres satisfait. Sorry, we failed to record your vote. Please try again Its also not pedal board friendly where do you put the Velcro. The underside is recessed. The pedal is so heavy it would probably detach anyway. Access to the boost would be impossible its on the wrong side. If weight is not an issue for you and you use it separate from your pedal board then this is probably a good wah I have seen many favourable reviews. I bought it because of the 2 voicings and the true bypass. It was my mistake that I didnt pay closer attention to the bulk. I just assumed that no competent designer of pedals would assume that it would be OK to build a pedal that weighs more than all my others put together. There are so many design issues with this pedal including its excessive size, weight and the fact it wont work on a pedal board, it just leads me to believe the manufacturer is pretty clueless about how the needs of a guitarist have evolved in the last 40 years. Soundwise its fine the two voices work well. Funky rhythms with one and mellow lead lines with the other. The other point to note is that this pedal does not match too well with many fuzz boxes. My Mooer fuzz box is not compatible with it.

Apparently this is an issue of buffering . Ill probably take a look at Xotic Effects new wah which is smaller, lighter and has an adjustable Q. Apparently it is also designed to like fuzz boxes. Sorry, we failed to record your vote. Please try again Didnt take a whole lot of pressure to activate like my old Vox wah used to, and sounded great once engaged. I pushed down through it, thinking maybe I was possibly underneath the button and needed more effort, but once it clicked down I didnt feel it push back up like its supposed to do. The pedal did not disengage and no amount of trying fixed it. I took off the bottom plate and didnt see anything out of place on the inside. I know this pedal is used by many professional musicians so hopefully its just an anomaly. Hopefully next time I can give it the full 5 stars I wished I couldve. Sorry, we failed to record your vote. Please try again I was between this and a Budda but after reading many reviews of people who once owned them switched to and loved this one, I was pretty much sold. The final nail in the coffin of the Budda for me was they are

now manufactured in China I believe and since then, people have had considerably more trouble with them. Vox tends to be too vintage for my taste. Vintage is great in a lot of respects, however it tends to leave one without versatility. Line 6 while always affordable is way too digital sounding for me, but that is what they do after all. Crybabies are ok but to me have little character or versatility. This is something that has made me dislike any wah by them save some of their signature stuff. This wah is manufactured by Dunlop but was designed by Bob Bradshaw, which makes it more of a CAE than a Dunlop. Having the red and yellow settings is like having two wahs in one, both of which are awesome in their own respects. The red has a deep voice that is great, if a bit muddy. I find the yellow to be my favorite due to its funky, well balanced tone.

The boost function is an excellent touch, adding a nice helping of overdrive which you can tailor to your sound without creating a bunch of nasty feedback. It also is still technically analog. Even though it has a great modern sound, it manages to do so without sounding digital. The only issue I have had with mine was the poor factory set up, which if you order things online, you are probably used to anyway. The rocker was stiff and sticky at first, so much so it knocked the whole internal mechanism out of place. This was quite scary at first but after opening it up and making a few adjustments and playing with the rocker, it operates and sounds incredibly smooth. I don't find the factory set up to have any bearing on the wah's performance, especially since I made its operation just as I wanted it without having to take it to a tech, so to me it has no effect on the overall score of the pedal itself. I love everything about this wah, from the tone, the ease of operation, right down to the LEDs. As the title states, this is the best I've ever used. If someone knows of a better one, please let me know. Happy wailing!! Sorry, we failed to record your vote. Please try again The CAE is another great variation of the crybaby wah. You get a high sound with the yellow Fasel and low sound with the red. Sorry, we failed to record your vote. Please try again It is very versatile. There are some knobs on the inside, one for each mode. I dialed in the perfect tone for my guitar setting on one mode and my bass guitar setting on the other. This has a permanent place on my pedal board. In fact if I were to only have one effect it would be this. If I could only have two I would add my big muff nano. Sorry, we failed to record your vote. Please try again You can change every parameter possible. It already has all the custom features that are commonly performed on a wah pedal. This thing sounds creamy smooth with the red transducer and has all the fiery treble you need via the yellow.

Switching between them can be done with your foot. Adding some boost can be done with your foot AND you can increase or decrease the boost level with your foot. This pedal outperforms all wahs twice the price. Also, unlike many many wahs, it doesn't change your tone when it's not engaged. That was the whole reason I hated dealing with most wahs was because they killed my tone. Sorry, we failed to record your vote. Please try again The Q trim pots vary the bandpass to taste. The internal pots are sensitive and an eighth of a turn is probably close to as much as you might want. The bandpass was pretty narrow as delivered, more than I personally cared for. Depends on your style and the specific song. I sometimes wish the pots were externally accessible. I changed the settings because the bandpass at its lowest frequency was too low at the factory settings. I probably should have left it alone, but it isn't my nature. It varies the yellow and red at the same time and you need to achieve a balance. Some of its range leaves undesirable artifacts in the sound. All in all a very nice pedal with enough tweaks to find your sound, not so many as to get lost. Sorry, we failed to record your vote. Please try again. True bypass. Side mounted switch activates preset boost. This pedal was developed by Bob Bradshaw and the Crybaby design team with the goal of creating a highly versatile Wah Wah of top grade components. Side mounted kick switches and bright LEDs on each side of the Wah, internal pots for Q and gain adjustments. Also features true hardwire bypass and long life CTS pot. Groet, Marco Adjustable Rocker Torque This pedal comes with an adjustable torque clutch that allows the user to control the amount of resistance the rocker has to being moved. The adjustment is located under the rocker at the heel of the pedal. By placing the rocker toe down

and looking under the rocker heel, you can see an adjustment allen head screw.

By turning this screw clockwise you can increase the rocker torque and conversely, counterclockwise, decreases the rocker torque. Adjustable Rocker Torque Turn the allen screw counterclockwise to loosen the pedal; clockwise to tighten. Zie ook pagina 7 van de manual van de Dimebag Wah Adjustable Rocker Torque This pedal comes with an adjustable torque clutch that allows the user to control the amount of resistance the rocker has to being moved. Zie ook pagina 7 van de manual van de Dimebag Wah Dank je, het stond niet in de handleiding die erbij zit, dat is namelijk het kaartje op de foto. Het is mij nu helemaal duidelijk. Groet, Marco.
