<http://columbuscigar.com/images/98-toyota-sienna-manual.pdf>

- If necessary, replace paper filter (do not attempt to clean). Install new filter on base.
- Slide pre-cleaner over filter.
- Install cover and wing nut.
- Tighten wing nut securely.

Clean Engine

- Clean engine periodically. Remove dirt and debris with a cloth or brush.
- Frequently remove grass clippings, dirt and debris from cooling fins, air intake screen and levers and linkage. See figure 14. This will help ensure adequate cooling and correct engine speed.

Figure 14

- Yearly or every 25 hours, whichever occurs first, remove the blower housing and clean the areas shown in figure 14 to avoid overspeeding, overheating and engine damage. Clean more often if necessary.

NOTE: Cleaning with a forceful spray of water is not recommended as water could contaminate the fuel system.

WARNING: Temperature of muffler and nearby areas may exceed 150° F(60°C). Avoid these areas.

Spark Plug

- Clean the spark plug and reset the gap to .030" at least once a season or every 50 hours of operation. See figure 15. Spark plug replacement is recommended at the start of each season. Refer to engine parts list for correct spark plug type.

Figure 15

NOTE: Do not sandblast spark plug. Spark plug should be cleaned by scraping or wire brushing and washing with a commercial solvent.

Muffler

WARNING: Do not operate the chipper-shredder without a muffler, or tamper with the exhaust system. Damaged mufflers or spark arresters could create a fire hazard.

• Inspect periodically, and replace if necessary. If your engine is equipped with a spark arrester screen assembly, remove every 50 hours for cleaning and inspection. Replace if damaged.

WARNING: Always stop engine, disconnect spark plug wire, and move it away from spark plug before performing any adjustments or repairs.

LUBRICATION

Lubricate the pivot points on the release bar, hopper assembly, chute deflector and chipper chute once a season using a light oil. See figure 16

Figure 16: Lubrication Chart
